

# Successful Adaptation in the Tijuana River Valley

## Framework

**Susi Moser, Ph.D.**

**Susanne Moser Research & Consulting and Stanford University**

Successful Adaptation workshop • Tijuana NERR, Maine • August 27, 2015

# Orienting ourselves

Time	WHAT	WHY
9:00 am	<b>Welcome &amp; Introductions</b>	Orientation Who is here?
9:20 am	<b>Framing the Day's Discussion</b>	Why are we here?
9:50 am	<b>Presentation &amp; Discussion: Thinking about “successful” adaptation</b>	What might successful adaptation mean to you? Why bother thinking about that?
10:10pm	<b>Breakout Group Discussion: Using insights from scenarios work to explore “successful” adaptation in the TRV</b>	Thinking over the next 10 years, what would “success” mean here?
...	....	

**Thinking about “successful” adaptation**

# What Does Success Look Like?

# What Does Success Look Like?

# Background & Origin

## Foundation #1

## Foundation #2

# Approach: Step-by-step

## 1. Literature Review

- Academic literature
- Guidance documents

## 2. Workshops & Interviews

- Academic & NGO scientists
- Practitioners in each state
- Capstone: Science and practitioners

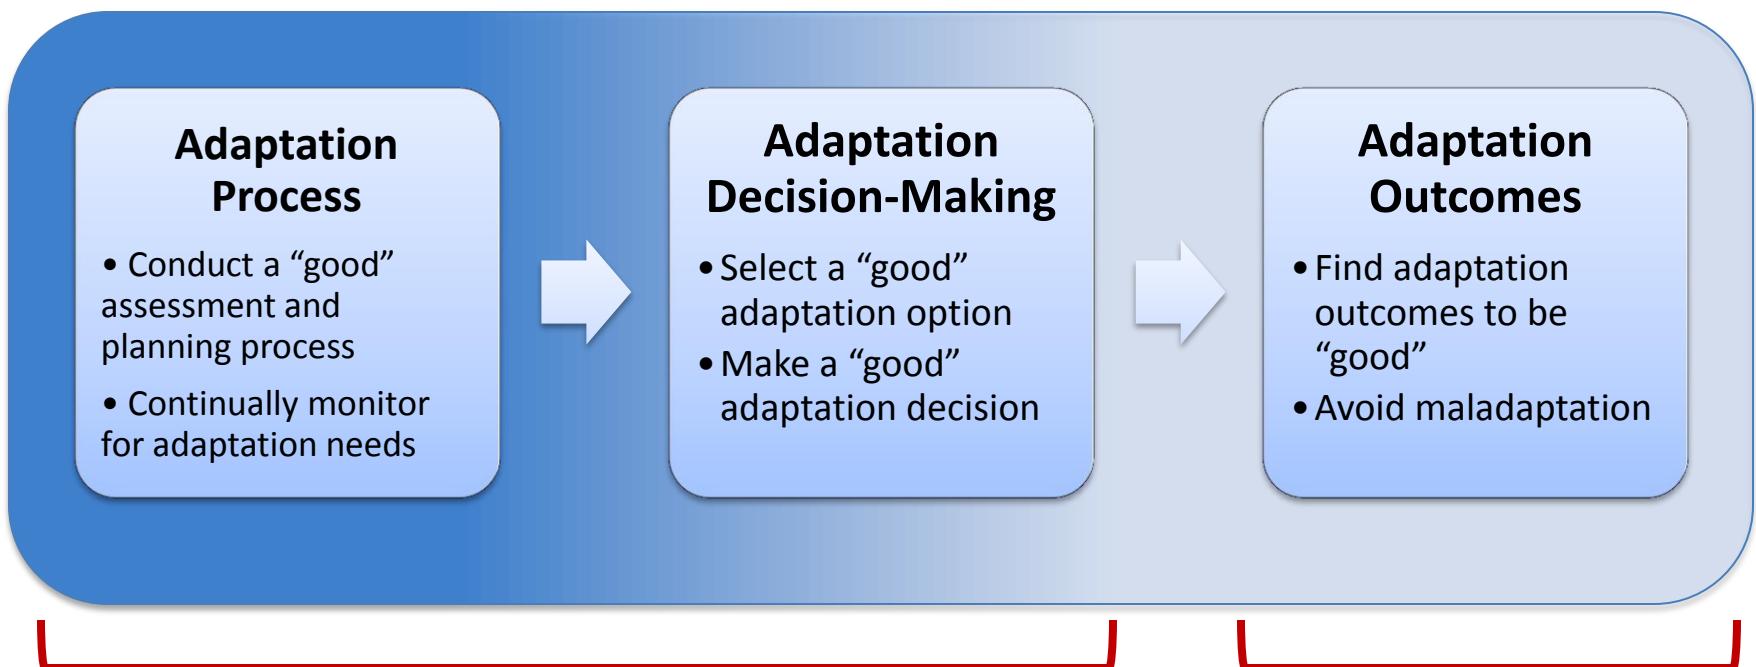

## 3. Synthesis & Dissemination

- Bridge-building & integration
- Synthesis paper
- Case studies, presentations...

# Dimensions of Adaptation Success

Commonly discussed in the scientific literature

**1<sup>st</sup> wave: 1990s-early 2000s**

**2<sup>nd</sup> wave: since ~2007**

# Failure-to-Success Continuum

- Maladaptation
- Inadequate response
- Stabilization of a degrading situation
- Repair and recovery
- Building something better

# Some Tough Questions

- Can science help or is it all subjective and political?
- What is the right scale at which to consider success?
- How and how much do we integrate across sectors?  
Across scales or levels of government?
- How do we address trade-offs?
- When can we declare success  
(or not)?
- How should we measure success?
- Who gets to say?

# “Success” in the Real World

- Washington State

- Oregon

- California

# Successful Adaptation to Climate Change on the West Coast

- Pre-workshop interviews with adaptation leaders (“practitioners”)
- Workshop with scientists and practitioners
  - “Fishbowl” of case studies
  - Group discussions
  - In-depth exploration of issues in small groups (process, outcomes, tradeoffs)
  - Evaluation
- Synthesis

# Case Studies

WASHINGTON	OREGON	CALIFORNIA
<b>Olympia:</b> preparing for sea-level rise & flooding	<b>Neskowin:</b> addressing coastal erosion	<b>Chula Vista:</b> implementing the Climate Adaptation Plan
<b>Bellingham:</b> incorporating sea-level rise in port redevelopment	<b>Oregon Shores:</b> launching Coastal Climate Change Adaptation Project	<b>San Diego:</b> San Diego regional climate action planning
<b>Swinomish:</b> multi-sectoral vulnerability assessment and adaptation planning	<b>State of Oregon:</b> developing Climate Change Adaptation Framework	<b>CA Dept of Fish and Wildlife:</b> developing the Climate Literacy College

# Key Reasons to Think About Success

**Overarching: Responsibility for safeguarding people, economy, infrastructure, cultural assets, environment**

## 1. Communication and Public Engagement

- Communicating hope and desirable goal to work towards
- Defining a common vision among diverse stakeholders

## 2. Deliberate planning and decision-making

- Setting clear goals, aligning means and ends (internal consistency)
- Best fit with other policy goals (external consistency)

## 3. Justification of adaptation expenditures

## 4. Accountability/good governance

## 5. Support for learning and adaptive management

# And Good Reasons NOT to Think About Adaptation Success

- Political sensitivities
- Funding sensitivities
- It's work, takes capacity, funding...

(“It’s too hard” is NOT a good reason!)

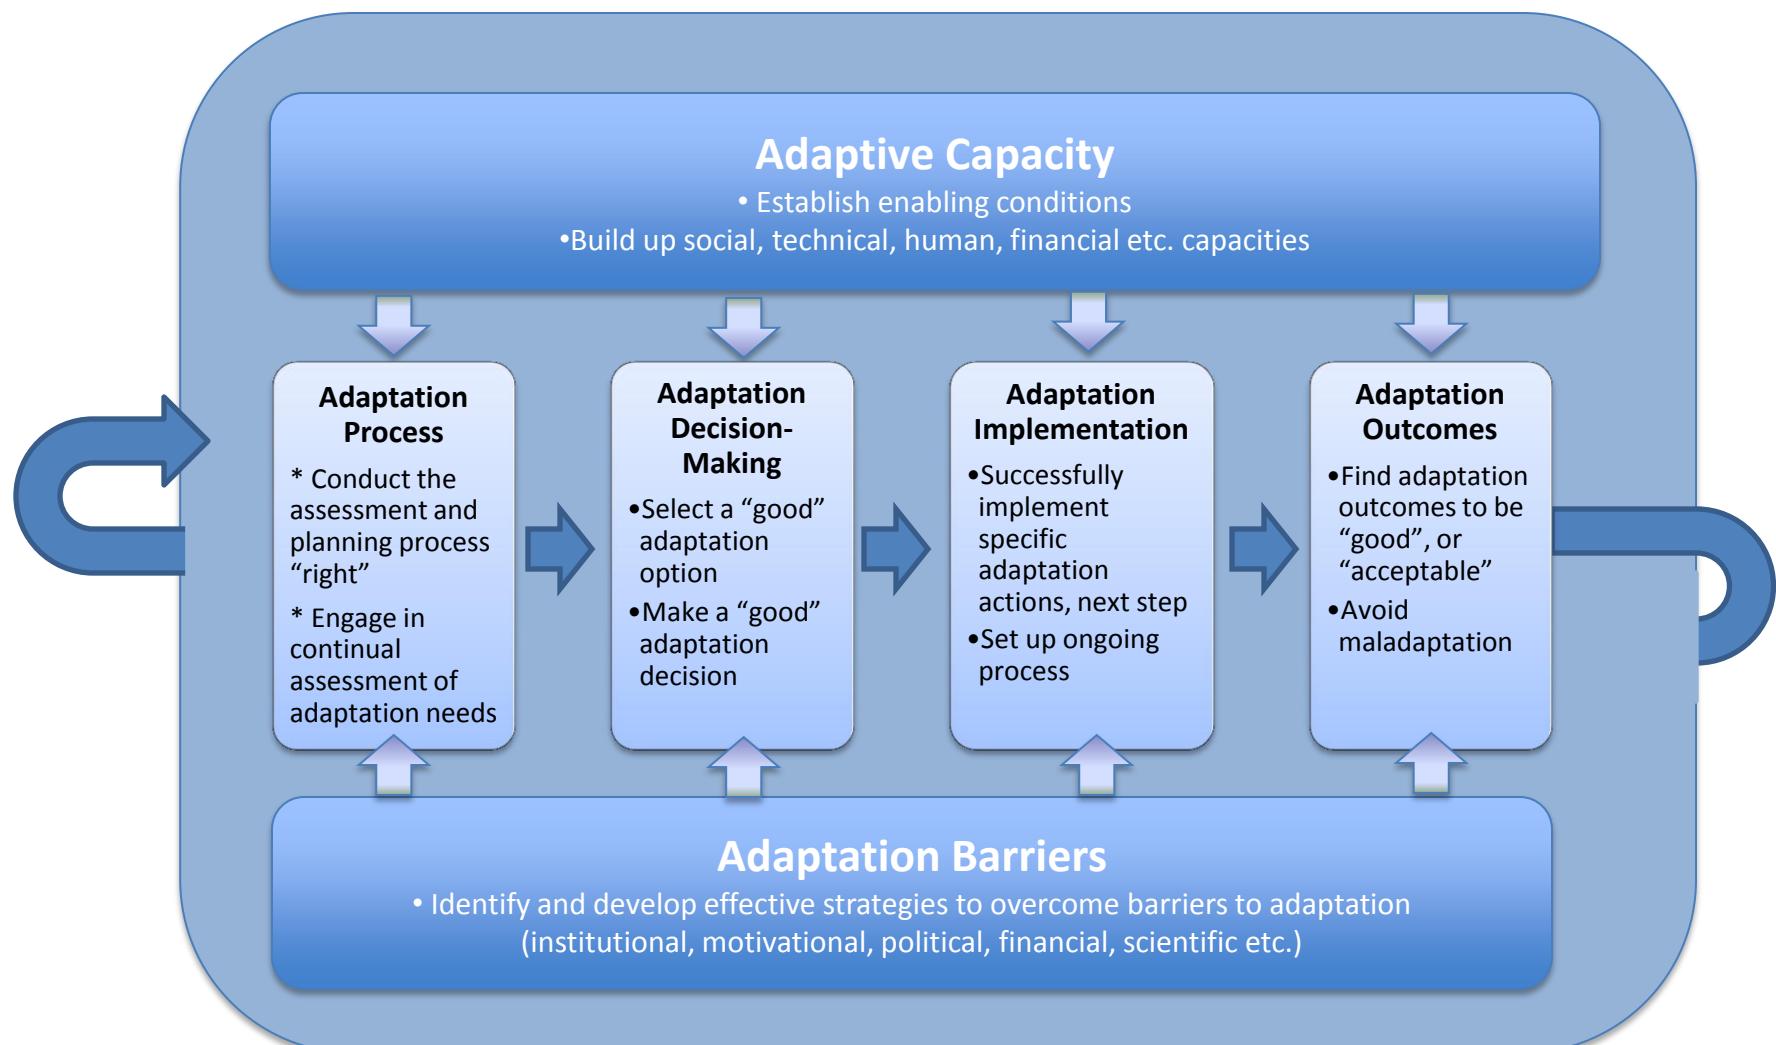

# Success in Practitioners' Minds

- “Hahaha. I don’t know...”
- **Capacity** – getting to a place to start
- **Actions** – that something gets done
- **Approaches** – how something gets done
- **People** – those who get it done
- **Process** – break it down & keep at it
- **Outcomes** – how it'll look, what we want

# Six Key Dimensions of Adaptation Success

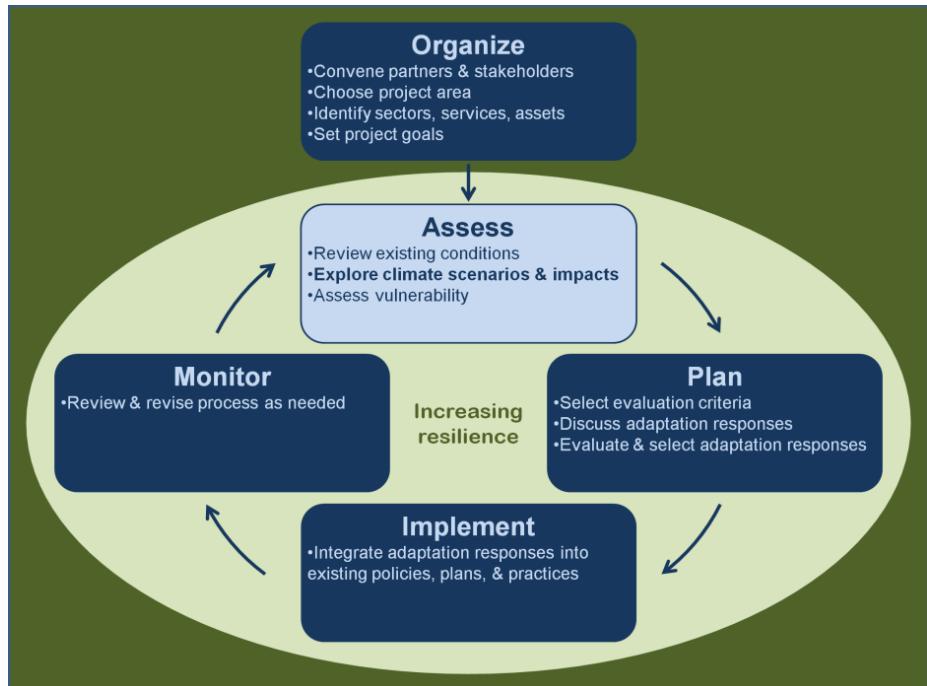

**Using results and insights from scenarios  
work to explore “successful” adaptation**

# Planning for an Uncertain Future

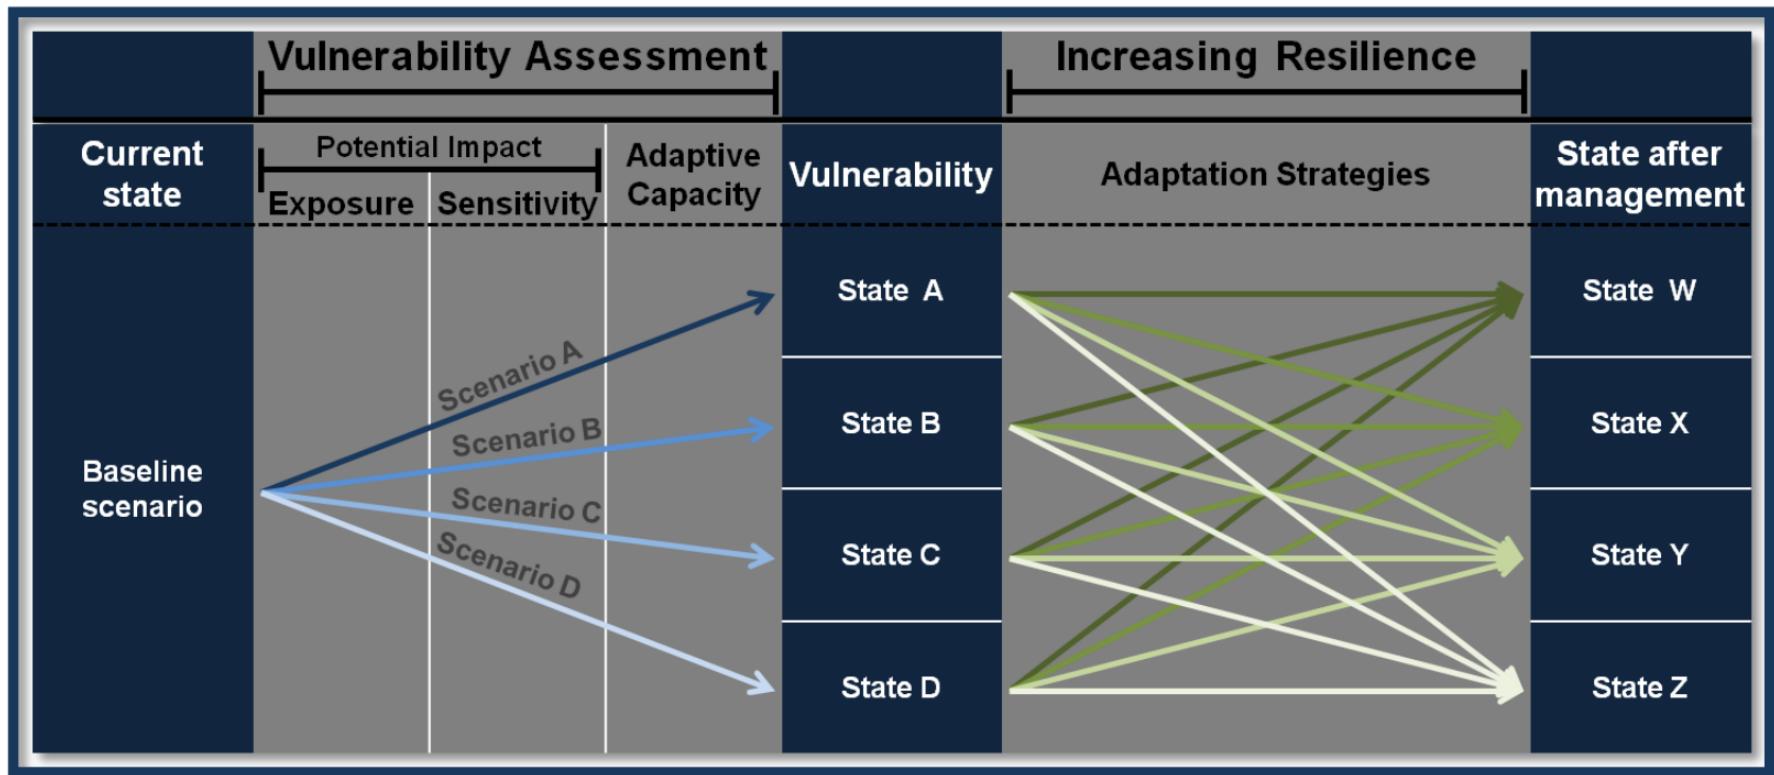

## Scenarios Assessment

## Use in Adaptation Planning

- What conditions are our systems sensitive to?
- Which conditions help or hinder the achievement of our goals?
- Where are the tipping points that force us to change strategies or goals?

# From Singular Adaptation Actions to Adaptation Pathways

**Figure 3:** Integrating scenarios into vulnerability assessment and adaptation planning [9].

Adaptation Pathway

# What Do People Want from Adaptation?

- Something better
- Something as good as what we have now
- At least a dignified way out

# Example 1

Setback ----- Seawall ----- Higher seawall ----- (Un)managed retreat --- ---?

# Example 2

# Breakout Group Discussion

## Set up

- In break-out groups with a facilitator
- Discuss one or more core elements of a vision of success for the region
- You have ~25 minutes in small group
- ~5 minutes whole-group report-out

## Guiding questions

- What do we want to see the region achieve?
- What do we want to see improved/ maintained/ changed in the next 10 yrs?
- How do we want to set ourselves up for continued success in 10 years time?
- In what ways is this goal sensitive to climate change?

# Elements of a vision for the region

- 
- 
- 
-

# Coffee/Tea Break
